1. INTRODUCTION

1.1. PRESENTATION

Dear customer,

Oscartek, glad to have among its customers, confident that you purchased the equipment fully meets your expectations. For this to happen it is advisable to follow the advice and instructions contained in this user's manual that you should always keep it safe for future reference.

1.2. USE OF EQUIPMENT

PERMITTED USED

This refrigeration unit is used exclusively for the exhibition and sale of confectionery products.

NOT PERMITTED USED

It is absolutely forbidden to use the equipment for storage of pharmaceutical products.

1.3. NORME RISPETTATE

The device is designed in meeting the safety standards laid down by the applicable directives:

Direttiva Macchine N° 2006/42/CE	: Regulations for the CE
Direttiva N° 2006/95/CE	: low tension
Direttiva N° 2004/108/CE	: electromagnetic compatibility
Norma CEI EN 60335-1 (CEI 61-150)	: Safety of household and similar electrical
Norma CEI EN 60335-2-24 (CEI 61-56)	: Particular requirements for refrigerators, freezers and ice makers

1.4. RESPONSABILITY

The manufacturer declines all responsibility for damage caused to persons, animals or the product itself due to:

- non-compliance with the rules in force;
- installation not in accordance with the provisions contained in the manual;
- failure to comply with maintenance recommended in the manual;
- extraordinary changes do not agree with the 'manufacturer';
- Operation of this equipment other than that provided.

1.5. WARNING

The manufacturer reserves the right, at any time and without obligation to promptly update the contents of the manual and / or modify the product in case it contributes to the improvement of the quality of the same.

2. TECHNICAL DATA

External dimension (LxWxH) (mm)		1390x686x2415
Type of display shelves		Glass tempered 477x1250mm thickness 10 mm
Number of shelves		8
Capacità netta di ogni ripiano (Kg)		15 kg regulary distributed
Prestazioni	Cliamtic class (°C/%U.R.)	3 - (+25° / 60%)
	Class Temperature	H2 (-1 ÷ +10)
	Temperatura di esercizio (°C)	+4÷ +15
Electric supplied (V/ph/Hz)		230 / 1 / 50 or 60
Type of refrigeration		ventilated
Type of defrost		Stop compressor
Refrigerant		R 404A
Illumination	Type	Led 4100°K 12V 9Watt/meter
	N°	4
Condensing unit	Type	Hermetic single-phase
	N°	1
Power/current absorbed (W/A)		350 / 1.5 (without U.C.)
Closing refrigerated compartment		Doors with double glass

3. INSTALLATION

3.1. MACHINE HANDLING

- The movement, the means of transport to the final site, must be carried out **following the instructions provided in the Appendix.**
- The cabinet can be shipped with or without wood packaging, in case wood crate will be used, will have a pallet base for an easy fork-lift handling. The pallet, however should be handle in the central position
- During the shipment, it is necessary to avoid any crash or/and shake of the display cabinet in order to not damage its frame, especially its glasses.
- Do not drag the display cabinet on the floor and do not push it on the upper glasses.

3.2 STOCK OF THE DISPLAY CABINET

- Whenever the cabinet has to be stoked, follow carefully what suggested before.
- Environmental temperature during the cabinet stock can have following range -15°C and + 55°C and humidity between 30% and 90%.
- The display cabinet has always to be protected by sunrays and raining.
- In case the display cabinet has to remain in stock quite long time before its use, keep it with its packaging in order to maintain its protection.

3.3. PACKAGING REMOVE

Before getting the display cabinet from the forwarding agent, check its conditions. In case it will be some damages, inform the driver and sign it on shipping documents. **Eventual damages relevant to the shipment and/or to the wrong stock, have not to be ascribed to the manufacturer.**

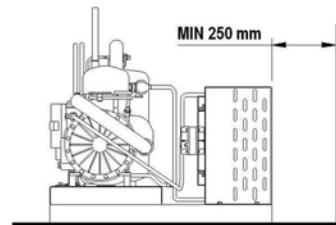

3.4. DISPLAY CABINET POSITION

The refrigerated display cabinet needs particular environmental conditions in order to offer the right performance, so that the area where it will be used has to respect following indications

- Floor has to be levelled perfectly, on the contrary keep the display cabinet on the horizontal position in order to guarantee a perfect defrosting water drain and avoid boring compressor noises.
- The display cabinet has to not be under the sun-rays in order to have its better refrigeration performance, has to remain inside the local or to be sheltered by window curtain. If what described above is not observed, it can determinate an increase of temperature of displayed product and an increasing power consume.
- The display cabinet has not to be under air currents due to open doors or windows, or under roof ventilators or under air condition outlets. In case will be not respected the above suggestions it can arise an increasing of temperature of the displayed product and/or an increasing ice phenomena on the evaporator and internal fans, which compromise the correct cold air circulation and product consistence
- The display cabinet has not to be placed close any heat source as heaters, ovens, etc
- The display cabinet has to have a sufficient place in order to ensure a correct custom service, to make an easy maintenance operation, to guarantee the right air flow necessary to make cold the condenser. Besides the warm air which flows out has to no have any obstacle or to invest other equipments in order to not reduce the correct functions.

3.5. REMOTE CONDENSING UNIT PLACING

- According to the model of ice cream display cabinet you have No.1 or No.2 internal, or remote, condensing units.
- The remote condensing unit has to be checked by specialised technicians and according to the required refrigerating power and their position respect the cabinet. The condensing unit has to be placed following these points:
 - The condensing unit has to be located at least 250 mm from any eventual wall. (pic.3.1)
 - Air flow direction has to be from the eventual wall towards compressor.
 - The local, in case will be closed, has to be with enough air circulation.
 - By the condenser has to be guaranteed in any case as much as possible cold air.
 - In case will be necessary it has to be foreseen a forced air exchange by any fan according to the air flow of condenser.
 - The condensing units of display cabinets have to be fixed properly.
 - The generated noise has not exceed the admitted noise levels relevant to the public places, especially in case of domestic buildings.
 - It is always necessary a sufficient place along the four sides of the display cabinet in order to make easy any type of check and maintenance operations.
 - When the condensing units are external will be necessary a frame holder that has to be fixed in a proper way and eventually added with amortising elements. Besides this frame has to be closet with no-water protection grid and sufficient opening holes for ventilation.

pic.3.1

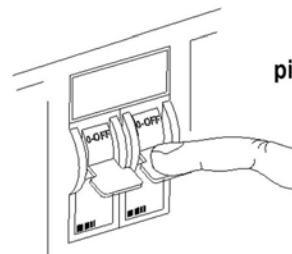

3.6 ELECTRICAL CONNECTION

- Before proceeding with electrical connection, be sure that the available electric power and tension are what is required on technical label of the cabinet.
- The electric connection has to be made by qualified personnel and following manufacturer's instructions taking into consideration the relevant norms in force.
- The display cabinet has already a general switch, however it is necessary an omni polar switch, with a minimum distance among the contacts of 3mm.
- It is obligatory that the display cabinet will be connected properly with an efficient ground socket.

WARNING! A wrong connection may occur always to persons, animals and things, where the manufacturer cannot be considered as responsible.

WARNING!

The display cabinet has no main switch breaking both the phases.
Before any maintenance operation disconnect the electrical supply of the display cabinet (see label on the rear of the display cabinet). (pic.3.3).

4. LOAD LIMITS AND NOTES TO THE CORRECT FUNCTIONING

4.1 SHELVES POSITION

WARNING! The glass shelves are numbered and must be placed inside the refrigerated criterion, only in this way you can ensure proper cooling inside the refrigerated compartment.

POSITION OF THE SHELVES

NUMBERS OH THE SHELVES

NUMBERS ENGRAVED ON GLASS SHELF

4.2 LOAD LIMIT

Each glass shelf can be loaded with a maximum weight of 15kg, the weight should be distributed evenly over the surface of the floor.

Leave between a product and the other sufficient space for air circulation and also to facilitate the grip by the customer.

Also leave a space of at least 3cm between the upper limit of the displayed product and the shelf immediately above to allow a more facilitates air circulation above the product itself.

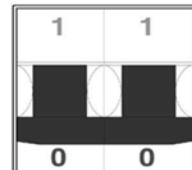

WARNING! The refrigerated cabinet is a fair distribution of the temperature when it is fully loaded (within the limits set by the load limits just mentioned).

In this case it will also be guaranteed a lower air exchange opening of the doors, with the consequent decrease in the percentage of compressor operation, and then with all the benefits associated.

5. ROUTINE MAINTENANCE AND PERIODIC CHECKS

- These kinds of operations are at client's expenses.
- In case some malfunctioning of the unit are observed, please make sure this is not due to non-maintenance reasons, before you apply to qualified assistance.
- The accurate and periodic cleaning of the unit will reduce the risk of damages to the unit itself and to the products stored within.
- See following tab for reference.

ATTENTION ! Before starting any maintenance and cleaning operation make sure you operate on the main switch in order to deactivate tension (pic. 5)

(pic 5)

MAINTENANCE OPERATIONS AND THEIR FREQUENCY. A SUMMARY TAB.

OPERATION	DESCRIPTION	FREQUENCY
Surfaces' cleaning	<ul style="list-style-type: none"> • Wash exclusively with warm water and neutral soap; rinse abundantly and wipe off with a soft cloth. • Do not use abrasive products 	weekly
Plastic surfaces' cleaning	<ul style="list-style-type: none"> • Wash exclusively with warm water and neutral soap; rinse abundantly and wipe off with a soft cloth. • Do not use alcohol, acetone and any solvent that might spoil the look and structure of the material. 	weekly
Glass surfaces' cleaning	<ul style="list-style-type: none"> • Use only specific products for glass cleaning • Using water alone might lead to calcareous deposits on the glass surfaces 	daily
Wooden surfaces' cleaning	<ul style="list-style-type: none"> • Use exclusively a wet cloth. 	weekly
Additional defrost	<ul style="list-style-type: none"> • Under particular conditions of temperature and humidity, the frost that normally forms on the evaporator and fans might increase in volume, so leading to a faulty functioning of the unit. • If these conditions should last, the assistance of a qualified technician shall be needed. Waiting for this service, it is suggested to operate one or more defrost cycles (despite the damages this might cause to the stored product) 	Waiting for qualified assistance
Periodic defrost	<ul style="list-style-type: none"> • In order to obtain the best performance from the cooling system, we suggest to operate an extended defrost cycle. • Before you do that, please remove displayed products from inside the cabinet; always operate an additional defrost cycle in order to remove from the evaporator the largest possible amount of frost or ice. Turn the main switch off for 5 hours (min.) • Before re-starting the unit, make sure that frost has totally melted and wipe carefully. 	max. 15 DAYS

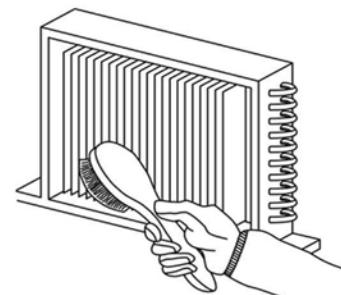

ATTENTION! DO NOT CLEAN THE UNIT WITH WATER JETS

6. EXTRAORDINARY MAINTENANCE

This type of operation has to be made by qualified technician only.

ATTENTION! Before operating any maintenance, make sure the tension is deactivated. (pic.11).

- Lamps' replacement: qualified technician needed.
- Air condenser cleaning: qualified technician needed. When the fan is switched off you can clean the condenser with a compressed air jet. Never use metallic brushes. Use protection gloves (pic.6).

(Pic.6.)

3.5 AUXILIARY OUTPUT

The auxiliary output is switch ON and OFF by means of the corresponding button on the keyboard.

The auxiliary output of the XW270K model controls the anti-condensing heater and it is automatically activated if the room temperature is lower than the "SA" parameter.

4. KEYBOARD

WING XW270K - XW271K

1. GENERAL WARNING

1.1 PLEASE READ BEFORE USING THIS MANUAL

- This manual is part of the product and should be kept near the instrument for easy and quick reference.
- The instrument shall not be used for purposes different from those described hereunder. It cannot be used as a safety device.
- Check the application limits before proceeding.
- 12 SAFETY PRECAUTIONS**
- Check the supply voltage correct before connecting the instrument.
- Do not expose to water or moisture: use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation
- Maintenance: disconnect all electrical connections before any kind of maintenance.
- Fit the probe where it is not accessible by the End User. The instruments must not be opened.
- In case of failure or faulty operation send the instrument back to the distributor or to "Dove s.a.r.l." (see address) with a detailed description of the fault.
- Consider the maximum current which can be applied to each relay (see Technical Data).
- Ensure that the wires for grounds, loads and the power source are separated and far enough from each other, without crossing or interfering.
- In case of applications in industrial environments, the use of mains filters (use mod. FT1) in parallel with auxiliary tools could be useful.

2. GENERAL DESCRIPTION

Models XW270K and XW271K are microprocessor based controllers suitable for applications on medium or low temperature refrigerating units. They must be connected by means of a three-core cable (C) (length > distance of up to 30 meters) to the keyboards T820 or T821. They are provided with six relay outputs to control compressors, defrosts, which can be either electrical or not (the XW270K has the evaporator fan), the light alarm and an auxiliary output. In XW271K, the auxiliary output is configured as anti-condensing heater (see address) with a detailed description of the fault.

They are also provided with three RTC probe inputs, one for temperature control, one to control the defrost and the third optional for the door switch and for the display. There are two digital inputs (free contact) or the door switch and configurable by means of a three-core cable (C) (length > distance of up to 30 meters) to the keyboards T820 or T821. They are programmed in continuous mode for the compressor defrost, which can be either electrical or not (the XW270K has the evaporator fan), the light alarm and an auxiliary output. In XW271K, the auxiliary output is configured as anti-condensing heater (see address) with a detailed description of the fault.

The standard T821 keyboard allows the user to connect, by means of a RS485 external module, a MODBUS RTU compatible monitoring system and a programme language (language FST). An optional output for RS485 direct is available.

3. CONTROLLING LOADS

3.1 THE COMPRESSOR

The regulation is performed according to the temperature measured by the thermocouple probe with a positive differential from the set point: the temperature increases and reaches set point differential the compressor is started and then turned off when the temperature reaches the set point value again.

In case of fault in the thermocouple probe the start and stop of the compressor are timed through parameters "CON" and "COF".

3.2 FAST FREEZING

When defrost is not in progress, it can be activated the keypad by holding the \ominus key pressed for about 3 seconds. The compressor operates in continuous mode for the time set through the "CCO" parameter. The cycle can be terminated before the end of the set time using the same activation key, \ominus , for about 3 seconds.

3.3 DEFROST

Three defrost modes are available through the "DEF" parameter: defrost with electrical heater, no electrical defrost. The defrost is made every "4F" time, (4F=5s) if the interval "4F" is calculated through Smart Defrost algorithm (only when the compressor is ON and the evaporator temperature is bigger than "SAF" parameter).

3.4 CONTROL OF EVAPORATOR FANS

The fan control mode is selected by means of the "FAN" parameter:

- C = running with the compressor. OFF during the defrost;
- C = running with the compressor. ON during the defrost;
- ON = continuous mode. OFF during the defrost;
- OFF = continuous mode. ON during the defrost;

An additional parameter "FSR" provides the setting of temperature, detected by the evaporator probe above which the fans are always OFF. This can be used to make sure circulation of air if the temperature is lower than set in "FSR".

4.2 HOW TO SEE THE MIN TEMPERATURE

- Press and release the \ominus key.
- The "L" message will be displayed followed by the minimum temperature recorded.
- By pressing the \ominus key or waiting for 5s the normal display will be restored.

4.3 HOW TO SEE THE MAX TEMPERATURE

- Press and release the \ominus key.
- The "H" message will be displayed followed by the maximum temperature recorded.
- By pressing the \ominus key or waiting for 5s the normal display will be restored.

4.4 HOW TO RESET THE MAX AND MIN TEMPERATURE RECORDED

To reset the stored temperature, when max or min temperature is displayed:

- Press \ominus key until "RST" label starts blinking.
- N.B. After the installation RESET the temperature stored.

4.5 HOW TO SEE AND MODIFY THE SET POINT

- Push and immediately release the SET key, the display will show the Set point value;
- The SET LED start blinking;
- To change the Set value push the \ominus or \oplus arrows within 10s. To memorise the new set point value push the SET key again or wait 10s.

4.6 TO START A MANUAL DEFROST

- Push the DEF key for more than 2 seconds and a manual defrost will start.
- After the manual defrost ends, the display will show the Set point value;
- To change the Set value push the \ominus or \oplus arrows within 10s. To memorise the new set point value push the SET key again or wait 10s.

4.7 TO ENTER IN PARAMETERS LIST "PR1"

To enter the parameter list PR1 (user accessible parameters) operate as follows:

- Enter the Programming mode by pressing the Set and DOWN key for few seconds (and start blinking).
- The instrument will show the first parameter present in PR1

4.8 TO ENTER IN PARAMETERS LIST "PR2"

To access parameters in PR2:

- Enter the PR1 list.
- Select PR2 and press the SET key.
- The PR2 starting message is displayed, shortly followed by "0 - " with a flashing zero.
- Use \ominus or \oplus to input the security code in the flashing digit, confirm the figure by pressing SET. The security code is a 321.
- If the security code is correct the access to PR2 is enabled by pressing SET on the last digit.

4.9 HOW TO CHANGE THE PARAMETER VALUE

- Enter the Programming mode.
- Selected the required parameter with \ominus or \oplus .
- Press the SET key to display its value and LED starts blinking).
- Use \ominus or \oplus to change its value.
- To exit: Press $\text{SET} + \text{UP}$ or wait 15 without pressing a key waiting the time-out.

4.10 HOW TO LOCK THE KEYBOARD

- Keep the \ominus and \oplus keys pressed together for more than 3 s (the \ominus and \oplus keys).
- The "P" message will be displayed and the keyboard is locked. At this point it is only possible the viewing of the set point or the MAX / Min temperature stored and to switch ON and OFF the light, the auxiliary output and the instrument.

TO UNLOCK THE KEYBOARD

Keep the \ominus and \oplus keys pressed together for more than 3s.

4.11 ON/OFF FUNCTION

By pressing the ON/OFF key, the instrument shows "OFF" for 5 sec. and the ON/OFF LED is switched ON.

During the OFF status, all the relays are switched OFF and the logic conditions are stopped. If a monitoring system is connected, it does not receive the instrument data and alarms.

N.B. During the OFF status the Light and AUX buttons are active.

4.12 TO SEE THE PROBE VALUES

- Enter in PR2 level.
- Select "P" parameter with \ominus or \oplus .
- Press the SET key to display "Pb1" label alternate with Pb1 value.
- Use \ominus and \oplus to display the other parameter values.
- Press SET to move to the following parameter.

5. PARAMETER LIST

REGULATION

- Hy Differential: (0-125.5°C, -145°F) Intervention differential for set point, always positive. Compressor Cut In = S1 Point Plus Differential (Hy). Compressor Cut Out = when the temperature reaches the set point. LS Minimum set point limit: (-50.0°C or -50.0°F)

US Maximum set point limit: (+50.0°C or +50.0°F)

US Outputs activation delay at start up: (0-255 min) This function is enabled at the start up of the instrument and inhibits any output activation for the period of time set in the parameter (AUX and Light can work)

AU Anti-shock cycle delay: (0-255 min) Interval between the deflection of the alarm condition and the start-up (0min-255 min) Time interval

dAO Delay of temperature alarm at start-up (0min-255 min) Time interval between the detection of the temperature alarm condition after the instrument power on and the alarm signaling: (0-255 min) Time interval between the alarm detection and the end of defrost: (0-255 min) Number of activation of the pressure switch number: (0-15) Number of activation of the pressure switch, during the "dAO" interval before signaling the alarm event (dAO = PAL)

tBA Buzzer and relay alerting: by pushing one of the keypad buttons.

ALM Temperature alarm configuration

ALM - High and Low alarms related to the absolute temperature.

ALU Low temperature alarm setting:

ALU = Ab = -50 °C or -50 °F + ALU

when this temperature is reached and after the ALU delay time the HA alarm is enabled.

ALL Low temperature alarm setting:

ALL = Ab = -50 °C or -50 °F + ALL

when this temperature is reached and after the ALU delay time the LA alarm is enabled.

AFH Temperature alarm and error differential: (0-25.5°C, -14.5°F) Intervention differential for temperature alarm set point and set point, always positive.

ALD Temperature alarm delay: (0-255 min) Time interval between the detection of the alarm condition and the closing of the door

dAO Delay of temperature alarm at start-up (0min-255 min) Time interval between the detection of the temperature alarm condition after the opening of the open door condition and its alarm signaling: the flashing message "dAO" is always active.

tBA Buzzer and relay alerting: by pushing one of the keypad buttons.

ALM Alarm delay at the end of defrost: (0-255 min) Time interval between the alarm detection and the end of defrost and the alarm signaling.

nPS Pressure switch number: (0-15) Number of activation of the pressure switch, during the "dAO" interval before signaling the alarm event (dAO = PAL)

PB INPUTS

PI Thermistor probe calibration: (-12.0 °C-21.0 °F) allows to adjust the temperature measurement unit: °C or °F (°F = Fahrenheit). When the probe is calibrated, the instrument will use the new unit.

PI Remote display : select which probe is displayed by the remote display

CF Temperature measurement unit: °C or °F (°F = Fahrenheit). When the measurement unit is changed the SET point and the values of the regulation parameters have to be modified.

PI (T820 or T821) Select the probe to be used.

PB Auxiliary probe calibration: (-12.0 °C-21.0 °F) allows to adjust the possible offset of the evaporator probe.

PB2 Probes probe preheat:

PI (T820 or T821) If the probe is not present the defrost stops

PI (T820 or T821) by temperature and time.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

PI (T820 or T821) by probe presence: if the probe is not present the defrost stops.

6.1 DOOR SWITCH INPUT

It signals the door status and the corresponding relay output status through the "dc" parameter.

Fan = Fan OFF.

C = Compressor and fan OFF.
Since the door is opened, after the delay time set through parameter "d0A", the alarm output is enabled and the display shows the message "dA". The alarm will stop as soon as the external digital input is disabled again. During this time and for the delay "dA" after closing the door, the high and low temperature alarms are disabled.

6.2 CONFIGURABLE INPUT - GENERAL ALARM (EAL)
As soon as the digital input is activated the unit will wait for a time delay before signaling the "EAL" alarm message. The outputs status don't change. The alarm stops just after the digital input is deactivated.

6.3 CONFIGURABLE INPUT - SERIOUS ALARM MODE (BAL)

When the digital input is activated the unit will wait for "d4" before signalling the "BAL" alarm message. The relay outputs are switched off. The alarm will stop as soon as the digital input is deactivated.

6.4 CONFIGURABLE INPUT - PRESSURE SWITCH (PAL)

If during the internal time set by the "nPS" parameter, the pressure switch has reached the number of activation of the "nPS" parameter, the PAL pressure alarm message will be displayed. The compressor and the regulation are stopped. When the digital input is off the compressor is always off.

6.5 CONFIGURABLE INPUT - START DEFROST (DFR)

It executes a defrost if there are the right conditions. After the defrost is finished the normal regulation will restart. If the digital input is disabled otherwise the instrument will wait until the "nFr" safety time is expired.

6.6 CONFIGURABLE INPUT - RELAY AUX ACTUATION (AIS)

This function allows to turn On and Off the auxiliary relay by using the digital input as external switch.

6.7 CONFIGURABLE INPUT - ENERGY SAVING (ES)

The Energy Saving function allows to change the set point value as the result of the SET + RES parameter. This function is enabled until the digital input is activated.

6.8 CONFIGURABLE INPUT - REMOTE ON/OFF (ONF)

This function allows to switch On and Off the instrument.

6.9 DIGITAL INPUTS POLARITY

The digital inputs polarity depends on "I1P" and "I2P" parameters.
C: The digital input is activated by closing the contact.
OP: The digital input is activated by opening the contact

7. INSTALLATION AND MOUNTING

T820 and T821 keypads shall be mounted on vertical panel, in a 150x31 mm hole and then using two screws (Ø 2.5 mm) to obtain an IP55 protection grade. Power modules XW270K and XW271K shall be mounted in a panel with two or more screws and they must be connected to the keypads by means of a two-wire cable (Ø 3 mm). The connection angle allowed to correct operation is 0 - 50 °. Avoid places subjected to strong vibrations, corrosive gases, excessive dirt or humidity. The same recommendations apply to probes, let the air circulate by the cooling holes.

*) In XW271L, AUX is an incondenser header

**) Which is latching

To reset the "EE" alarm and read the normal functioning press any key, the "s1" message is displayed for about 3s.

If "a" or "y" on the alarm signal is detected the buzzer and the relay are is emitted by pressing any key.

If "a" or "y" on the alarm signal is silenced while the alarm relay is on until the alarm condition recovers.

Buzzer is mounted in the T820 and T821 keypads and it is an option.

11.1 SILENCING BUZZER/ALARM RELAY OUTPUT

The dIXEL instruments are provided with an internal check for the data integrity. Alarm "EE" flashes when a failure in the memory data occurs. In such cases the alarm output is enabled.

11.2 "EE" ALARM

The dIXEL instruments are provided with an internal check for the data integrity. Alarm "EE" flashes when a failure in the memory data occurs. In such cases the alarm output is enabled.

11.3 ALARM RECOVERY

Probe alarms: "P1" [probe fault], "P2" and "P3" after the probe restarts normal operation. Check connections before replacing the probe. Temperature alarms "HA" and "LA" automatically stop as soon as the thermostat returns to normal values or when the defrost starts. Door switch "da" stops as soon as the door is closed.

External alarms "EAL", "BAL" stop as soon as the external digital input is disabled. "PAL" alarm is recovered by switching OFF the instrument.

12. TECHNICAL DATA

T820 and T821 keyboards

Power supply: 230VAC or 110VAC ± 10%
Power absorption: 0.7W max.
Dimensions: 150x35x15 mm, depth 23mm.

Protection: IP20; IEC60529 with metal case and RGS, (optional).

Connections: Screw terminal block 2.5 mm² head-mesh wire and 6.3mm Power supply: from XW270K or XW271K power module
Display: 3 digits red LED, 14.4 mm high.

Optional output: buzzer

Power modules XW270K and XW271K

Case: black, 150x35x15 mm, height 50mm, open board 132x14 mm, height 30mm, open board 132x14 mm, height 47 mm. Self extinguishing ABS. IP55, UL approved. Connections: screw terminal block 2.5 mm² head-mesh wire and 6.3mm Faston: power supply 230VAC or 110VAC ± 10%
Power absorption: 0.7W max.
Digital inputs: 3 NTC probes.
Digital outputs: 3 relay contacts for load MAX. 20A
Relay outputs: 2/NO with thermal protection 10A/250VAC
compressor relay (S1): 2/NO/250VAC
light: relay S1/S2 (S1) A, 250VAC
fans: relay S1/S2 (S1) A, 250VAC
defrost: relay S1/S2 (S1) A, 250VAC
alarm: SFR70/90, SP3/SP1 relay (S3) A, 250VAC
auxiliary (XW270K): SP1/SP2 relay (S2) A, 250VAC
heater (XW271K): SP1/SP2 relay (S2) A, 250VAC
output: 110VAC, 50/60Hz
Communication protocol: Modbus
Data storing on non-volatile memory (EEPROM).
Kind of action: 16 bit.
Pollution grade: 3.
Software grade: normal

Operating temperature: 0...60 °C.

Storage temperature: 20...85 °C.

Measuring and regulation range (NTC probe): 40...+10°C (-58...+23°F)

Accuracy (ambient temp. 25°C): ±0.5 °C ± 1 digit
